Supercars Tours crowdfunding preparation pack

We are preparing an equity funding round of €700,000 to €1,000,000 for Supercars.Tours, an independent guide and supplier discovery platform for supercar owners. Current operations are UK only. The working financial model uses €850,000 as a planning midpoint, not an agreed investment offer.

The immediate task is to demonstrate that suppliers will pay for access to relevant owners and that owners trust the comparisons. The final funding target should follow a costed delivery plan and evidence of demand.

What is established

- The founder has specified an intended €700k to €1m raise and UK operations.
- The proposed team includes the founder, Charlie as COO and Lorenzo Granay in Italy. Lorenzo's role and all legal appointments remain to be confirmed.
- Discussions are in progress with one person in Ireland and one in Spain. They are not confirmed hires or country launches.
- Proposed revenue comes from supplier listings, category sponsorship, lead generation and premium placement. The platform does not sell tours.

How to use the pack

Read the executive summary and funding recommendation first. Complete the founder input sheet, validate the model and assemble the evidence register before circulating an investment pitch. The campaign copy, pitch outline and outreach messages are starting drafts.

The PDF combines the documents for review. Matching Markdown files are editable sources. The Excel workbook contains a 36 month operating and cash forecast, funding calculations and reconciliation checks. The slide outline is content for a future deck, not a completed presentation.

Submission status

Not ready for submission. Incorporation details, ownership, current financials, product evidence, traction, founder biographies, valuation and investment terms remain unconfirmed. Platform acceptance and required legal documents depend on the issuer, instrument and investor jurisdictions. The checklist is a preparation register, not a complete statutory filing pack.

The contents page lists each document and its starting page. All sources were checked for preparation on 18 October 2026.

Contents and working priorities

Use the editable source files to update individual documents. Page numbers refer to this combined PDF.

Document	Starts on page
Start here and submission status	1
Executive summary	3
Funding route and intended ask	4
Business and operating plan	6
Supplier packages and terms brief	9
Editorial and scoring policy	10
Validation tools and evidence register	11
Financial model guide	13
Campaign page and investor questions	14
Founder video and outreach drafts	16
Content for a 12 slide pitch deck	17
Risks and due diligence requirements	20
Preparation and launch plan	23
Founder information and open decisions	24
Sources and assumptions	25

Working priorities

Confirm the issuer and ownership, supply a current demo and actual trading evidence, then replace the forecast assumptions with a costed delivery plan. Agree platform eligibility and offer terms before finalising public investment materials.

Executive summary

Supercars.Tours is developing a guide that helps supercar owners compare tour operators and find specialist services. The proposed business earns revenue from suppliers seeking visibility and enquiries from owners. We intend to preserve editorial independence through published scoring rules and clear advertising labels.

The customer problem

The founding hypothesis is that owners find it difficult to compare driving tours and assess specialist suppliers across scattered websites, recommendations and social groups. A tour focused on driving can offer a very different experience from one focused on hotels and hospitality. Owners need those differences explained in comparable terms.

The proposed product

The initial product combines operator profiles, driving and luxury assessments, comparison filters and a directory of specialist suppliers. Owner feedback, newsletters and enquiry routing can follow once the underlying data and consent processes work. Native mobile apps, route planning and community features are later options, conditional on repeat use and funding.

Who pays

The initial commercial focus is UK suppliers in transport, PPF and detailing, carbon repair, exhausts and parts, specialist maintenance, classic car repair and track activities. Finance and insurance remain potential categories, subject to review of the actual advertising and referral activity before activation.

The original proposed annual listing range is €300 to €5,000. Sponsorship is €5,000 to €10,000 annually, leads €20 to €80 each and premium placement €500 to €1,500 monthly. These are proposed prices, with no willingness to pay evidence yet supplied.

Funding and team

The intended raise is €700k to €1m. We recommend an equity route, supported by a lead investor and a community campaign once evidence supports the amount. The founder, Charlie as COO and Lorenzo Granay are the stated team. Roles, time commitments, biographies and ownership need documentary confirmation.

What needs to be demonstrated

The investment case depends on a relevant audience, supplier willingness to pay, reliable lead attribution, repeat supplier revenue and an editorial process that resists commercial influence. No revenue, traffic, registered user count, signed partners or historic financial statements have been supplied. Those figures must be added with dated evidence before this summary becomes an investor document.

Recommended funding route

Equity crowdfunding is the strongest fit for the intended €700k to €1m raise. Supercars.Tours is seeking capital for a continuing commercial platform, and shares give backers an interest in the business. This recommendation concerns the funding structure; it does not establish that the business can yet raise that amount.

Recommended sequence

1. Establish the issuing company, ownership and intellectual property rights.
2. Run a focused UK commercial pilot and collect evidence of owner use and supplier payments.
3. Test the investment case with a suitable lead investor and seek documented commitments on agreed terms.
4. Apply to an equity platform with a substantiated pitch, model and launch community.
5. Launch only when the platform's requirements, offer documents and sufficient campaign demand are in place.

If the pilot evidence is too early for the full round, define a smaller milestone round with its own budget. Do not reduce the target arbitrarily or promise that a subsequent raise will occur. Any staged round must fund a usable next milestone independently.

Platform assessment

Candidate	Relevant published criteria	Next decision
Crowdcube	Its partner guidance describes growth capital for private companies and ideally revenue with customer or user traction [S1]	Confirm UK issuer eligibility, euro denomination and evidence expectations
Republic Europe	Eligibility includes UK, EU, EEA or Swiss business and community presence, a target above £/€150k and appropriate community and precommitments [S2]	Confirm UK issuer structure, euro raise and launch support

Neither platform has assessed or accepted Supercars.Tours. Request current fee quotes, required legal documents, minimum commitments, nominee arrangements and investor country restrictions. A UK operating footprint does not establish the company's registration or permission to market securities globally.

Other funding routes

Rewards may help test demand for a defined guide or membership benefit, but are a weak primary fit for this round size and supplier funded model. Kickstarter currently prohibits equity and certain service provider or marketplace projects; the proposed platform would require careful eligibility assessment [S3]. Debt requires credible repayment capacity that has not yet been demonstrated.

UK investment and loan crowdfunding sit within FCA regulated categories. Rewards and donation routes are treated differently [S4]. Use the selected platform and advisers to determine the actual offer and promotion requirements.

Funding ask and use of proceeds

The founder's intended range is €700,000 to €1,000,000. Use €850,000 only to plan delivery and assess affordability until the budget, valuation and investor demand support a final target. Euro fundraising and UK operations require an explicit policy for sterling costs and currency risk.

Illustrative gross and net proceeds

The following arithmetic assumes an 8 percent variable fundraising allowance and €20,000 of fixed fundraising and legal costs. These are planning assumptions, not platform quotations. They exclude any additional taxes on fees unless included in the final quotes.

Gross raise	Variable allowance	Fixed allowance	Net available
€700,000	€56,000	€20,000	€624,000
€850,000	€68,000	€20,000	€762,000
€1,000,000	€80,000	€20,000	€900,000

Spending proposal to cost

Build the initial comparison and directory product, maintain supplier information and scoring evidence, recruit the delivery team, acquire relevant UK users and test paid supplier packages. Budget separately for privacy, contracts, accounting, insurance and campaign execution. Retain a cash reserve for delays and weaker collections.

The financial workbook links its first year spending categories to the monthly forecast. Its assumptions do not represent supplier quotes, salary commitments or an approved hiring plan. Any excess of the target over the model's funding need must be justified by specific additional activity or retained capital policy. Do not manufacture costs to match the desired raise.

Scope at different amounts

- At €700k, prioritise the UK website, evidence quality, supplier onboarding and one repeatable acquisition process. Release hiring and marketing funds against measured results.
- At €850k, add capacity only where the pilot demonstrates a bottleneck and the revised model supports the hire or channel.
- At €1m, additional product or market work needs its own budget and acceptance criteria. International expansion and a native app are not automatic commitments.

Terms still required

Confirm the minimum close, maximum accepted investment, valuation, share class, shareholder rights, option pool, existing convertibles, fees, use of any overfunding and treatment of a failed campaign. No investor return, exit date or tax relief is promised in this pack.

Product and business plan

The proposed launch product helps UK users make a specific decision: choose a tour suited to their driving and hospitality preferences, or find a relevant specialist supplier. Keeping the first version focused makes editorial quality and commercial value easier to measure.

Initial product scope

An operator profile should contain comparable tour facts, price basis and currency, driving days, approximate driving distance, group size, accommodation details, included support, exclusions and the date checked. Each fact needs a source or an explicit statement that the information is unavailable.

Comparison filters should reflect information the team can maintain reliably. Start with geography, duration, driving intensity, accommodation level and budget. Explain whether prices are per person, per car or for two people sharing. Do not combine unlike prices into a ranking.

The supplier directory should capture service category, coverage area, contact method, company identity, supported vehicle types and the basis for any credential claim. Display paid placement separately and record when a supplier last confirmed its details.

Boundaries and dependencies

Supercars.Tours does not sell or operate tours in this plan. Owners contract with the provider. Any later booking or payment feature requires a new review of liability, operating costs and applicable requirements. Do not imply that a directory listing guarantees workmanship, insurance coverage or tour safety.

Owner reviews require moderation, a way to identify a relevant experience, a correction process and permission to publish supporting material. An enquiry feature needs an explicit recipient, lawful handling, secure records and a dispute process for invalid leads.

Product acceptance criteria

- A user can compare a consistent set of sourced operator facts and understand missing data.
- An editor can update a profile and preserve its source and revision history.
- A supplier can request a listing and accept clear commercial terms.
- Paid content is visibly labelled and cannot change an editorial score.
- Analytics distinguish browsing, enquiries and paid supplier outcomes.

Mobile apps, route planning, community and track integration remain possible later features. Prioritise them only when user research identifies a need that the website cannot meet adequately.

Market focus and acquisition plan

The long term audience can include people interested in supercars around the world. The first commercial audience should be narrower: UK owners and active buyers with a current tour, maintenance, transport or protection need. Enthusiast traffic can support reach, but does not by itself prove demand for suppliers.

Initial market approach

Start with a small set of service categories and geographic areas where the team can maintain accurate information and recruit suppliers. A proposed pilot can cover transport, PPF and detailing, carbon repair and specialist maintenance. Confirm the final categories through owner interviews and supplier access. Classic car services may be included where they overlap with the audience; treat the broader classic car market as a separate expansion hypothesis.

Acquisition experiments

Publish comparison and service pages addressing an identified owner question. Measure enquiries and repeat visits alongside search traffic. Obtain owner group or club permission before promotion and use separate tracking for each participating channel. Do not imply a club partnership without agreement.

Use an email newsletter to bring owners back to updated guides. Add WhatsApp broadcasting only after a documented sign up process, a clear purpose and a workable opt out. Separate marketing permission from a request to send an enquiry to a named supplier. UK electronic marketing requirements depend on the recipient and circumstances [S5].

Commercial measures

For each channel, record spend, sessions, attributable enquiries, accepted leads, paid suppliers acquired and contribution after delivery costs. Record why leads are rejected and whether the supplier would purchase again. Track organic performance separately from paid advertising.

Competition and market size

Build a dated comparison of search engines and maps, specialist directories, automotive communities, owner clubs, operator websites and relevant publications. Add named competitors only after reviewing their current product, commercial model and audience. Do not claim that Supercars.Tours is the first or only platform without evidence.

Size the initial revenue opportunity from deduplicated eligible UK supplier locations, realistic paid penetration and validated annual spend. Keep listings, premium upgrades, sponsorship inventory and lead demand separate so the same spending is not counted twice. Global car values and the number of enthusiasts are not measures of the platform's addressable revenue.

Team and operating plan

The stated team is the founder, Charlie as COO and Lorenzo Granay in Italy. Full identities, roles, employment status and time commitments must be confirmed. Two further discussions concern individuals in Ireland and Spain. These discussions do not establish staffing, local operations or partnerships.

Proposed responsibility structure

Function	Proposed owner	Evidence needed
Fundraising	Founder	Identity, experience, availability and authority
Operations	Charlie as COO	Identity, agreed duties and appointment terms
Lorenzo contribution	Lorenzo Granay	Role, availability, experience and terms
Engineering	To appoint or contract	Technical owner, security and IP terms
Editorial	To appoint	Methodology owner and research capacity
Country discussions	Ireland and Spain prospects	Identity, consent and scope if appointed

Operating cadence

Review cash, product delivery and commercial activity monthly. Keep a register of supplier claims, contract renewals, complaints, information updates and editorial corrections. The founder should approve hiring and campaign spending within an agreed budget, with board approval where applicable.

Separate the person selling sponsorship from the decision on editorial scoring. Where a small team makes full separation impractical, record the conflict and require a second reviewer for the affected assessment. A supplier should be able to correct facts without purchasing a package.

Hiring and supplier plan

Cost the team by role, start month, employer charges, benefits and contract type. The model's founder, editorial, sales and additional team costs are illustrative allocations; they do not establish remuneration for any named person. Obtain development and content quotes with deliverables, IP ownership and acceptance terms.

Key dependencies

The business needs someone accountable for technical delivery, accurate content and B2B sales. Founder relationships may help recruit initial suppliers, but the process needs to become repeatable. Document access to the domain, code, analytics, mailing tools and bank accounts so that delivery does not depend on one person's credentials.

The present plan remains UK only. Any further country launch needs evidence and its own budget.

Supplier pricing and commercial terms brief

The following structure turns the proposed revenue streams into packages that can be tested with UK suppliers. All amounts are proposed in euros. Confirm customer billing currency, VAT treatment and tax inclusive or exclusive presentation before quoting or contracting.

Offer	Original proposed price	Deliverable to define
Annual listing	€300 to €5,000 per year	Profile content, categories, locations, reporting and support
Category sponsorship	€5,000 to €10,000 per year	Named inventory, period, permitted creative and exclusivity scope
Accepted lead	€20 to €80 per lead	Eligibility, attribution, duplicates, acceptance and refunds
Premium placement	€500 to €1,500 per month	Labelled position, availability, delivery period and reporting

Suggested pilot offer

Test a straightforward annual listing with a fixed profile specification and transparent renewal terms. Add higher priced packages only when the team can demonstrate incremental commercial value. Do not bundle promised lead volumes into a listing unless the cost, delivery obligation and refund treatment are explicitly agreed.

The model uses an illustrative €900 blended annual listing price, €7,500 sponsorship, €750 monthly premium placement and €40 per accepted lead. These are modelling assumptions within the original ranges, not accepted customer prices.

Lead acceptance specification

A billable lead should identify the requested service, relevant location and a usable contact method. The owner must understand which named supplier will receive the enquiry. Define how long a duplicate remains a duplicate, when a lead is too old, how the supplier disputes a charge and when a credit is issued. A contact detail alone is not a sale or a completed job.

Agreement drafting brief

Include the contracting entity, package, delivery scope, term, fees, payment schedule, currency, tax basis, renewal notice, cancellation, suspension, complaint handling, liability allocation and data responsibilities. Obtain permission for logos, images and testimonials. Define analytics access and distinguish clicks, enquiries and accepted leads.

Finance and insurance referral activity should remain inactive until the exact user journey and commercial arrangements have been assessed. An advertising label or description as a lead generator does not settle whether an activity needs permission. Relevant FCA guidance addresses credit brokers and insurance introductions [S6, S7].

Sponsorship and premium placement buy disclosed visibility. They do not buy an editorial score, a favourable owner review or a guarantee of supplier quality.

Editorial independence and scoring proposal

Trust is central to the proposed product. The commercial model should make it possible for an owner to understand how each assessment was produced and whether the supplier paid for visibility.

Proposed comparison method

Maintain separate driving and luxury dimensions rather than assuming one universal best tour. Publish the criteria, rating scale, assessment date, evidence sources and missing information. Agree the methodology before publishing numeric scores.

For driving, proposed criteria include driving time, route character, group size, support arrangements and flexibility. For luxury, proposed criteria include accommodation, dining, hospitality and included services. Test whether owners find these dimensions useful. A stated hotel star rating or a route description should not automatically become an editorial verdict.

Evidence and uncertainty

Distinguish operator supplied facts, desk research, direct experience and owner feedback. Never imply that a tour was personally tested when it was researched online. If important information is unavailable, show that limitation instead of assigning an arbitrary score. Publish a correction route and record the reason for each material change.

Owner feedback should include the experience date and a relevant verification basis where practical. Verification is a process description, not a guarantee of truth. Moderate conflicts, fabricated reviews, personal data and supplier responses under a consistent policy.

Commercial separation

- Clearly label advertisements, category sponsorship and premium positions.
- Keep organic sorting and scores independent of commercial spend.
- Offer a factual correction process to paying and unpaid operators alike.
- Record personal relationships, free trips, gifts, affiliate arrangements and other conflicts.
- Let the editorial owner reject an inaccurate commercial claim.

Governance and practical tests

Before launch, score the same sample profiles with two reviewers and compare disagreements. Revise ambiguous criteria. Ask owners to complete comparison tasks and explain the meaning of each rating. Keep an evidence folder for published claims and a version history for the methodology.

The board or founder should review complaints, scoring changes involving sponsors and any pressure to change editorial content. Supplier contracts must state that payment has no influence over editorial assessments. This policy is a proposal to implement and test; it does not establish that an independent scoring operation already exists.

Validation plan and investor evidence register

The pitch needs evidence of both owner demand and supplier willingness to pay. The proposed research below is a practical starting point, not a platform rule or a statistical guarantee.

Proposed pilot

Interview 20 UK owners or active buyers and 20 suppliers across the selected categories. Ask about recent decisions and actual spending before presenting the product. Then run a small paid pilot with suppliers on clear terms. A suggested initial objective is five paying suppliers and a complete account of enquiries delivered, accepted and rejected. These are future research targets, not achieved traction.

Owner interview questions

1. How did you choose your last tour or specialist supplier?
2. What evidence changed your decision, and what information was missing?
3. Which driving and hospitality differences matter to you?
4. Use the prototype for a current decision. Observe the task.
5. What would make you distrust sponsored content or comparisons?

Supplier interview questions

1. Which customers do you serve, and what makes an enquiry useful?
2. What do you spend on acquisition, and how is it measured?
3. What makes a lead invalid, and who decides whether to pay?
4. Which package would you buy, at what price and on what terms?
5. Will you agree to a defined paid pilot?

Evidence register fields

Record a claim ID, exact wording, location, evidence file, period, method, owner, verification date and publication permission. Label claims as verified, founder supplied, proposed, forecast or unsupported. Nonbinding interest is not revenue or a contract.

Claim to establish	Evidence	Current status
Active user demand	Dated analytics with definitions and bot filtering	Not supplied
Paying suppliers	Executed contracts, invoices and matching receipts	Not supplied
Repeat commercial value	Renewals, accepted leads and supplier feedback	Not supplied
Product functionality	Working demo and dated feature inventory	Not independently verified
Team capability	Approved biographies, references and agreed roles	Partial founder description

Pilot expression of interest and traction template

Supplier expression of interest template

This is a discussion template for a nonbinding pilot expression of interest. An actual paid pilot requires an agreed contract and data terms. Have the final wording reviewed for the intended jurisdiction and purpose.

Supplier legal name: [COMPLETE]

Contact name and role: [COMPLETE]

Service category and locations: [COMPLETE]

We have reviewed the proposed Supercars.Tours pilot consisting of [SPECIFIED DELIVERABLES] over [PERIOD]. Subject to a final contract and satisfactory review of the product, we are interested in discussing [PACKAGE] at [CURRENCY AND PRICE] plus applicable taxes.

For lead generation, our proposed acceptance criteria are [CRITERIA]. We would expect [ATTRIBUTION AND REPORTING] and a process for disputed leads. This expression does not authorise sharing personal data or using our name, logo or comments in public materials.

This expression is not a purchase order, payment commitment, investment commitment, exclusive arrangement or signed partnership. Either party may stop discussions. Any binding confidentiality or other obligations should be documented separately.

Name: [COMPLETE] Date: [COMPLETE] Signature if appropriate: [COMPLETE]

Monthly traction report template

Reporting period: [START AND END] Prepared by: [NAME] Evidence folder: [LINK]

Record website sessions, defined active users, verified owner share if measured, newsletter subscribers with permission, and repeat usage. State the definitions and any measurement changes.

Record supplier prospects contacted, proposals, executed contracts, active paying suppliers, invoiced revenue, cash received, cancellations and renewals. Distinguish pipeline value from contracted revenue.

Record enquiries, valid enquiries, accepted paid leads, rejected leads by reason, disputes, credits and attributable supplier outcomes where available. Protect owner personal data in investor materials.

Record acquisition spend, sales effort, moderation time and delivery costs. Explain whether improvements result from a new channel, seasonality, a definition change or a repeatable process.

The report should end with a decision: continue, change the offer, revise the acquisition channel or stop the test. Keep unsuccessful results in the internal record so the forecast reflects actual learning.

Financial model and funding discipline

The workbook is a 36 month illustration in euros, beginning in the first fully funded operating month. It is designed to expose the relationship between supplier growth, revenue timing, costs and cash. It is not a valuation, audited forecast or complete set of financial statements.

Model structure

Summary presents annual recognised revenue, collections, operating results, cash and customer volumes. Assumptions contains editable prices, conversion rates, costs, launch months and monthly activity. Forecast calculates the monthly operating plan. Raise calculates net investment proceeds, first year deployment and simple equity ownership when valuation and share inputs are supplied.

Annual listings and sponsorships are billed at the start of each service year and recognised across 12 months. Renewal occurs at the annual anniversary. Premium placement and accepted leads are recognised and collected monthly. Fractional customer and lead counts represent expected values. Sponsorship inventory and premium placements are capped.

Illustration at the planning midpoint

Illustrative result	Year 1	Year 2	Year 3
Recognised revenue	€44,987	€285,734	€552,540
Operating net cash flow	(€253,777)	(€40,327)	€114,309
Closing cash with €850k raise	€508,223	€467,897	€582,206

This placeholder plan calculates a gross funding need of €433,719, including a €75,000 reserve and the stated fee assumptions. It therefore does not yet justify the full intended €700k to €1m round. That target needs a more complete costed plan and evidence supporting the sales assumptions.

Inputs to replace before submission

Replace opening cash, existing customers, deferred revenue, liabilities, supplier prices, conversion rates, customer additions, renewals, salaries, development quotes and acquisition costs. The model currently assumes no existing cohorts or opening obligations. This assumption does not establish actual trading history.

All UK cost estimates must be entered as euro equivalents using a documented budget rate and date. No GBP to EUR conversion has been performed in this illustration. Add a sterling cost schedule and currency sensitivity when quotes are available. Confirm whether a UK issuer can raise and settle in euros on the selected platform.

Material limits

The model assumes immediate collection and excludes VAT, corporation tax, bad debts, debt service, existing liabilities and a detailed balance sheet. Development is treated as cash spending and fully expensed for this plan. Contingency is modelled as additional spending. The operating result shown before development is not net profit.

The final model needs management accounts, tax and working capital schedules, founder remuneration, employment costs and the selected platform's fee basis. Run slower sales, weaker renewal and higher cost cases before committing to the ask. Any spending before the round closes needs a separately funded plan.

Equity campaign page draft

Campaign introduction

We are developing Supercars.Tours to help owners compare supercar tours and find specialist services with clearer information. We plan to combine transparent tour comparisons with a directory of suppliers serving owners, starting in the UK.

The problem we are testing

Owners can spend time moving between operator websites, recommendations and specialist groups to work out which experience or supplier suits them. We want to make the differences easier to understand, including how much a tour focuses on driving and how much it focuses on hotels and hospitality.

Our approach

We plan to publish comparable operator profiles, explain the evidence behind our assessments and make missing information visible. Owners will be able to discover services such as transport, PPF, carbon repair, specialist maintenance and track activities. Paid listings and sponsored positions will be clearly labelled.

How the business earns revenue

Suppliers would pay for listings, sponsorship, premium visibility and accepted enquiries under defined terms. Commercial payments would not determine editorial scores. The original pricing proposal ranges from €300 to €5,000 for annual listings, with additional packages to be validated through supplier pilots.

Why we are raising

We intend to raise €700k to €1m, subject to a final costed plan and agreed offer terms. The investment would fund product delivery, accurate content, supplier onboarding, customer acquisition and the team needed to operate the service. Our financial model currently uses an illustrative €850k midpoint.

Team and evidence to complete

The stated team includes [FOUNDER FULL NAME], Charlie [SURNAME] as COO and Lorenzo Granay [ROLE TO CONFIRM]. Insert approved biographies, current product evidence, dated traction, contracted supplier revenue and customer permissions before publication. Do not publish this paragraph with placeholders.

Invitation to prospective investors

Once an offer is approved and live, eligible investors can review the final pitch, evidence, financial plan, terms and risks through [PLATFORM AND APPROVED LINK]. Investment involves the risk of losing all capital, illiquidity and future dilution. The platform must supply or approve the applicable warnings and promotion wording.

This copy requires replacement of the open fields and platform review. It makes no claim of existing revenue, market leadership, guaranteed returns, tax relief or signed partnerships.

Investor questions and proposed answers

Who is the customer

Owners and active buyers use the guide. Suppliers pay for commercial services. A broad enthusiast audience may help reach, but the business must demonstrate that it attracts people with relevant purchasing needs.

Why would suppliers pay

The hypothesis is that a specialist audience, accurate category information and measurable enquiries can create value beyond a general listing. Supplier pilots, payments, renewals and accepted lead data must substantiate that hypothesis.

How does independence work

The proposed policy separates editorial scores from paid placement, publishes the methodology and records conflicts. Implementation, staffing and user understanding need to be tested. Sponsorship does not purchase a favourable review.

What exists today

The founder has identified supercars.tours as the project website. The current feature set, users, traffic, revenue and partner contracts have not been independently verified in this preparation work. The founder must provide a working demo and evidence of any claimed traction.

Why this amount

€700k to €1m is the founder's intended range. The final ask should match a detailed budget, credible milestones and an appropriate cash reserve. €850k is the model's planning midpoint. It should not be presented as an approved need or accepted valuation.

What valuation and equity are offered

Neither is set. For a simple primary share issue, new investor ownership equals new investment divided by the sum of pre money valuation and new investment. Options, convertibles, different share rights and other transactions can change the result.

Will you sell tours or arrange finance

Tour sales are outside the current plan. Finance and insurance are potential supplier categories, but the actual advertising and referral arrangements require a permissions assessment before activation. The current forecast does not depend on regulated referral income.

How could investors make a return

Any return depends on future business performance and a lawful distribution or liquidity event, neither of which is assured. No exit timetable, dividend policy, resale facility or return multiple is promised.

Why start in the UK

Current operations are UK only. Concentrating product and commercial validation in one market limits the initial delivery burden. Italy based involvement and discussions in Ireland and Spain are not evidence of operational launches in those countries.

Founder video and outreach drafts

Founder video script of about 90 seconds

I am [FULL NAME], the founder of Supercars.Tours.

We are developing a guide to help owners compare supercar tours and find specialist services. We want owners to see the practical differences between tours, including driving time, route character and the hospitality experience.

Our proposed platform combines comparable operator information with a directory of suppliers such as transport businesses, PPF specialists, carbon repairers and specialist maintenance shops. We plan to earn revenue from clearly labelled supplier listings and commercial packages. Editorial scores will follow a published method.

We are starting with UK operations. Our stated team includes Charlie as COO and Lorenzo Granay, whose role we will explain in the final campaign. [INSERT APPROVED TEAM EXPERIENCE AND A DATED PRODUCT DEMONSTRATION.]

We intend to raise between €700,000 and €1 million, subject to the final plan and offer terms. The funds would support product delivery, content, supplier onboarding and customer acquisition. [INSERT VERIFIED TRACTION AND COSTED MILESTONES.]

When the offer is live, eligible investors can read the full information, terms and risks at [APPROVED CAMPAIGN LINK]. Investing in an early stage company involves risk, including the loss of your investment.

Lead investor introduction draft

Subject: Supercars.Tours equity round and UK supplier pilot

Hello [NAME], we are preparing an equity round for Supercars.Tours, a proposed independent comparison and supplier discovery platform for supercar owners. The intended raise is €700k to €1m, with UK operations as the initial focus. We would welcome a discussion about the commercial evidence and milestones needed for a lead investment. I can share our summary, product demonstration, evidence register and financial assumptions. [ADD VERIFIED TRACTION AND RELEVANT PERSONAL INTRODUCTION.] Best, [FOUNDER].

Supplier research invitation draft

Hello [NAME], we are researching how UK supercar specialists attract customers and assess enquiries. We are developing Supercars.Tours and would value a short discussion about the customers you serve, current acquisition methods and what makes an enquiry useful. This is a research request; any paid pilot would have separate agreed terms. Best, [FOUNDER].

These messages have not been sent. Use relevant recipients, appropriate permissions and approved investment promotion language. A research conversation must not be represented as an endorsement or investment commitment.

Pitch deck content slides 1 to 4

Use this outline to build a 12 slide investor presentation after the evidence fields are completed. Keep one main claim on each slide and place its evidence in the speaker notes or source footer.

Slide 1 Company and proposed round

Supercars.Tours. Independent comparisons and supplier discovery for supercar owners. UK operations. Intended raise €700k to €1m, with final terms to be agreed. Show the website and founder contact once confirmed. Avoid first, only, leading or largest claims.

Suggested visual: a genuine current product screenshot with a date. Label any mockup clearly.

Slide 2 Owner problem

Present one documented owner decision and the information needed to compare alternatives. Separate the tour comparison problem from supplier discovery. Add findings from owner interviews with dates, participant count and limitations. Until interviews exist, label the problem as the founding hypothesis.

Suggested visual: the actual steps taken in one researched owner journey.

Slide 3 Product demonstration

Show an operator comparison and a supplier profile. Identify what works today, what is in development and what is planned. Explain driving and luxury dimensions and how missing information appears. Do not use a polished concept image as proof that a feature is live.

Suggested visual: two genuine screens annotated with source dates and feature status.

Slide 4 Paying customer and initial market

Show the initial UK supplier categories and the owner intent each serves. Distinguish the wider enthusiast audience from users with a service or tour decision. Explain which category is being tested first and why the team can recruit and serve it.

Suggested visual: a small matrix of pilot categories, target owner needs and current supplier evidence. Add a bottom up estimate only after deduplicating eligible suppliers and validating realistic spend.

Evidence required before design is final

Product feature inventory, screenshots, founder approved company description, owner interviews, supplier mapping and publication permission for any named business. The team should be able to trace every numeric claim to the evidence register.

Pitch deck content slides 5 to 8

Slide 5 Commercial model

Show who pays, what they receive and when payment occurs. Present annual listings first, with sponsorship, accepted leads and premium visibility as distinct services. Use the original proposed price ranges and identify which prices, if any, have been accepted by customers.

Suggested visual: four revenue streams with a short definition of each deliverable. Explain that visibility purchases do not change editorial scores.

Slide 6 Traction and validation

Show dated paying supplier counts, cash received, relevant owner activity, accepted leads and renewals. Define active users and distinguish invoices from receipts. When a metric is not yet available, show the planned test rather than a fabricated result.

Suggested visual: a dated pilot funnel from actual users to enquiries and accepted leads. Report rejected leads and paid acquisition costs alongside successes.

Slide 7 Competition and differentiation

Compare named, reviewed alternatives across owner use case, comparable information, geographic coverage, commercial model and treatment of advertising. Distinguish general search, clubs and communities, specialist media, directories and operator websites.

Suggested visual: a concise evidence based comparison. The current proposed differentiation is transparent comparisons and a focused owner supplier audience. It is not yet a demonstrated barrier to entry.

Slide 8 Acquisition and economics

Explain how the first UK users and paying suppliers are acquired. Use actual channel spend, sales effort, accepted lead value and early retention when available. State when customer acquisition cost includes staff time and when it excludes it.

Suggested visual: one measured acquisition experiment. Do not present lifetime value based on an assumed renewal rate as an observed result. The model's retention, session conversion and paid lead assumptions remain illustrations.

Questions the presentation must answer

Why would an owner return? What does a supplier gain beyond a general directory? How much editorial work is required per profile? Can the acquisition process work outside the founder's relationships? What happens to revenue when a sponsor leaves? Attach evidence or a specific test to each unresolved question.

Pitch deck content slides 9 to 12

Slide 9 Team and delivery capacity

Present the founder, Charlie as COO and Lorenzo Granay using agreed titles and approved biographies. Show relevant operating, product, editorial and sales experience with dates or verifiable examples. Identify the technical and editorial roles still to fill.

Do not list the Ireland or Spain prospects as team members until they agree and their roles are established. Lorenzo's Italy location does not establish an Italian business launch.

Slide 10 Milestones and deployment

Show a sequence from accurate directory and comparison data to paid supplier pilots, repeatable acquisition and renewals. Assign each milestone an owner, budget, period and acceptance evidence. Make the plan achievable at the minimum accepted raise.

Suggested visual: the funded roadmap. App development, route planning and further countries should appear only where justified and costed.

Slide 11 Financial plan and funding need

Show three annual forecast columns with recognised revenue, operating costs and closing cash, sourced from the workbook. State that the forecast is illustrative until management validates it. Explain annual subscription cash collection separately from revenue recognition.

Use the gross to net proceeds table and identify the proposed cash reserve. Include the principal downside assumptions. No forecast should imply guaranteed profit or that an investor can readily sell shares.

Slide 12 Proposed offer and material risks

State the final approved gross target, minimum close, valuation, share class, investor rights and use of any overfunding once agreed. Currently the only founder specified funding term is the intended €700k to €1m range.

Include material risks covering demand, execution, supplier concentration, editorial trust, data handling, dilution, loss of capital and illiquidity. Use the selected platform's approved risk wording and campaign link. Omit tax relief claims until eligibility and permitted wording are confirmed.

Presenter notes

Keep answers aligned with the campaign page, financial model and offer documents. If evidence changes, update every version. Do not rely on speaking notes to correct a misleading headline. Before the deck is circulated as an investment promotion, obtain the route specific review required by the platform and advisers.

Risk register and proposed mitigations

The following are material preparation risks. Ratings and probabilities are deliberately not assigned without management assessment. Mitigation reduces exposure; it does not eliminate it.

Risk	Possible effect	Proposed response
Weak owner intent	Traffic produces few useful enquiries	Test current owner tasks and measure accepted leads
Supplier willingness to pay	Low conversion or renewal	Paid pilots with clear delivery and renewal evidence
Editorial conflicts	Loss of owner trust	Published method, labelled advertising and conflict review
Search and channel dependence	Acquisition cost or traffic changes	Measure channel contribution and build permission based return use
Product or data quality	Inaccurate comparisons and complaints	Source records, update cadence, testing and corrections
Delivery and key people	Delays or loss of access	Agreed roles, technical owner, IP terms and controlled account access
Lead privacy or permissions	Complaints, enforcement or costs	Review the actual data journey and regulated categories before activation
Funding and FX	Delayed close or higher sterling costs	Minimum funded scope, cash reserve and dated currency assumptions
Investor liquidity and dilution	Capital loss or reduced ownership	Clear offer terms, risk disclosure and no promised exit

Demand and financial downside tests

Reduce new supplier additions, delay the paid launch, reduce annual renewals and increase salaries or development costs. Model slower receipts, disputed leads and GBP cost increases once underlying costs are available. Define when management would stop an experiment, defer a hire or reduce marketing.

Commercial concentration

Track the share of revenue from the largest suppliers and sponsors. Category sponsorship inventory is limited; it cannot grow indefinitely through the same slots. Check that a premium package provides useful visibility without crowding out ordinary listings or misleading owners.

Scope and responsibility

Tour and supplier information can affect high value decisions. Keep claims accurate and state the basis of assessment. A listing or comparison must not be presented as a safety, insurance or workmanship guarantee. Have the actual contracts and user journey reviewed rather than relying on a general disclaimer.

Assign an owner, review date and evidence of action to each risk before submission. Add risks specific to the final company structure, employment arrangements, suppliers and investment instrument.

Data room and company evidence checklist

Prepare a controlled data room with a dated index and access appropriate to the recipient. Share sensitive identity, banking and personal information through the platform's secure process. This list identifies evidence to collect; it does not create or verify the underlying records.

Company and ownership

- Certificate of incorporation, company number, registered office, group chart and trading names.
- Current articles, statutory registers, beneficial ownership records and shareholder agreements.
- A reconciled cap table covering issued shares, options, warrants, convertibles and other rights.
- Previous investment documents, debt, grants, founder advances and material obligations.
- Authority and consents needed for the proposed round and any new share rights.

Team and intellectual property

- Full identities, approved biographies, roles, time commitments and director appointments.
- Employment, consultancy and adviser agreements, confidentiality and IP assignments.
- Domain registration and control, code ownership, design and content licences, trademarks and relevant open source obligations.
- A list of disputes, conflicts, related party transactions and any required disclosures.

Financial and tax evidence

- Historic accounts where available, current management accounts and bank reconciliations.
- Revenue by contract and period, invoices, receipts, deferred revenue and renewal cohorts.
- Liabilities, payroll obligations, taxes, litigation and contingencies.
- Forecast assumptions, cost quotes, hiring plan, currency basis and use of funds.
- Treatment of campaign fees, VAT, corporation tax and potential investor tax relief if relevant.

Product and commercial evidence

- Current demonstration, feature status, delivery estimates and technical dependencies.
- Analytics exports with metric definitions and data periods.
- Signed supplier contracts, commercial terms, paid pilot results and actual renewals.
- Permissions for logos, testimonials, partner names, photos and quotations.
- Scoring method, sample assessments, review moderation and corrections log.

Data room controls

Each record should have a document owner, version, date and disclosure status. Redact personal data where the full detail is unnecessary. Keep an index of the exact documents used to substantiate campaign claims. Crowdcube's published process includes checks on the company, directors and claim evidence [S8]; the selected platform will determine its actual requests.

Offer and operating document requirements

These documents need to be completed or supplied after the legal entity, instrument and platform are known. The preparation drafts in this pack do not replace the executed offer or operating documents.

Investment documents

Document	Responsible party to confirm	Dependency
Platform application and company disclosures	Founder with platform	Issuer identity and substantiated business information
Final pitch and financial promotions	Platform and issuer with advisers	Current evidence and required approval process
Subscription or investment agreement	Platform and legal adviser	Instrument, share class, price and closing conditions
Articles and shareholder or nominee terms	Legal adviser and platform	Rights, governance and investor structure
Board and shareholder approvals	Directors, shareholders and adviser	Company constitution and transaction terms
Share issuance and registry filings	Company and adviser	Completed allotment and applicable deadlines
Investor risk and disclosure materials	Issuer and platform	Applicable investor and offer jurisdictions

If an EU crowdfunding offer is used, assess whether the European Crowdfunding Service Providers Regulation applies and whether a key investment information sheet is required. Article 23 sets responsibilities for preparing and checking that information [S9]. A UK operating business is not automatically an eligible EU issuer or offer.

Operating documents

Prepare website terms, privacy and cookie notices, supplier listing terms, lead sharing terms, sponsorship agreements, review moderation and complaints policies, editorial independence rules and appropriate contractor agreements. Draft each against the actual product, data collection, supplier role and payment flow.

Finance and insurance need an activity specific assessment before enquiries or commissions are enabled [S6, S7]. For email and WhatsApp marketing, document the recipient type, permission or other applicable route, suppression process and evidence of sign up [S5].

Tax and currency decisions

Confirm the UK entity's accounting currency, proposed euro denomination and settlement, sterling operating costs, tax treatment and bank fees. Do not promise SEIS or EIS availability or other investor tax outcomes without confirming eligibility and the permitted campaign wording.

The founder should appoint the appropriate legal and accounting support once the platform and company structure are selected. Record unresolved items, owners and evidence of completion before submission.

Preparation and launch plan

Use this relative timetable once the founder has confirmed availability and budget. It is a suggested work plan, not a promised campaign launch date. Platform assessment, legal work and evidence collection may extend it.

Period	Work	Completion evidence
Weeks 1 and 2	Confirm issuer, roles, ownership, product status and current finances	Founder input sheet, demo and indexed records
Weeks 3 to 6	Owner and supplier research, category mapping and paid pilot	Interview notes, signed terms, payments and defined metrics
Weeks 5 to 8	Revise model, cost milestones and test investor interest	Cost quotes, downside plan and documented investor feedback
Weeks 7 to 10	Assess platforms and prepare application	Eligibility response, fee quote and required document list
After acceptance	Complete diligence, offer terms and approved campaign assets	Platform and adviser requirements satisfied
Before public launch	Test campaign demand and confirm delivery resources	Approved materials and credible commitments
During campaign	Answer questions and update material changes	Consistent disclosures and current evidence
After successful close	Complete legal steps and begin funded delivery	Funds available, cap table and reporting calendar

Launch conditions

The issuing entity and authority to raise are confirmed. Product claims are demonstrated. Published traction is traceable to evidence. The financial plan funds the minimum delivery scope and includes material obligations. Team roles, IP ownership and supplier contracts are documented. The selected platform has completed the required review and approved the public materials.

Keep an evidence based commitment register separating interest, nonbinding pledges, signed commitments and cleared funds. Do not invent social proof or describe expressions of interest as secured investment. Agree any public commitment target with the platform; there is no universal threshold assumed here.

If preparation does not support launch

Extend validation, revise the scope or define a separately funded milestone round. Preserve cash by pausing unproven acquisition spending and unfunded hiring. A successful campaign is not a substitute for supplier demand.

Reporting after close

Provide updates on product delivery, relevant owner use, paying suppliers, renewals, accepted leads, cash and material risks. Follow the investor documents and platform reporting obligations. State the period, source and explanation for changes. Report delays and corrective actions promptly.

Founder information and open decisions

Complete this sheet to turn the preparation pack into an evidence based investor submission. A blank field means unconfirmed, not zero or absent.

Company and people

Founder full name and preferred title: [COMPLETE]

Legal company name, number, incorporation country and registered office: [COMPLETE]

Charlie full name, COO agreement, experience and time commitment: [COMPLETE]

Lorenzo Granay role, experience, time commitment and relationship to the company: [COMPLETE]

Ownership, share classes, options, founder loans and prior investment: [COMPLETE]

Ireland and Spain discussions, status and permission to identify individuals: [COMPLETE]

Product and evidence

Website and demonstration access, current features and development owner: [COMPLETE]

Current monthly traffic and registered or active users, with definitions and dates: [COMPLETE]

Paying suppliers, signed contracts, revenue and cash received by period: [COMPLETE]

Owner interviews, supplier interviews, pilot outcomes and permissions: [COMPLETE]

Domain, software, content and brand ownership: [COMPLETE]

Funding and delivery

Confirmed intent: €700k to €1m. Current operating scope: UK only.

Preferred minimum close, target and maximum, with costed milestones: [COMPLETE]

Existing cash, liabilities, founder funding and spending before close: [COMPLETE]

Role based remuneration, hiring dates, development quotes and marketing budget: [COMPLETE]

Budget exchange rate, sterling cost exposure and settlement arrangements: [COMPLETE]

Valuation approach, share terms, lead investor discussions and target timing: [COMPLETE]

Legal adviser, accountant and platform contact once appointed: [COMPLETE]

Immediate priority

Confirm the legal company and provide a current product demonstration, any actual traction and available financial records. Those inputs determine whether the full intended round is credible now and which documents can be completed next.

Sources and assumptions register

Prepared 18 October 2026. Founder statements establish the intended euro raise, UK operating scope, business concept, proposed prices and stated team. They do not establish incorporation, contracts, actual traction or legal appointments.

The website address supplied is https://supercars.tours. Attempts to retrieve the site during this preparation did not produce usable page content. No conclusion about whether the website is live or functional follows from that retrieval failure. A founder demonstration is required.

Interpretation

The equity recommendation, proposed pilot, team responsibilities, product priorities, milestone sequence and all forecast assumptions are preparation proposals. They are not evidence of platform acceptance, legal eligibility, customer demand or agreed employment. Recheck platform terms and applicable requirements at submission.
