

ECOGRID RESORT™ — Investor Meeting Brief

PERSONAL REFERENCE · NOT FOR DISTRIBUTION · June 2026 · All figures unaudited

THE TWO COMMERCIAL MODELS

MODEL 1 — Direct Sale

Client pays 100% of CAPEX upfront

Client CAPEX	5,700,000 €
Our EPC margin (15%)	855,000 €
SaaS /site/yr	5,000 €
Maintenance /site/yr	10,000 €
Recurring /site/yr	15,000 €
Client payback	≈ 7.5 yrs
SmartGrid capital at risk	ZERO

MODEL 2 — Financed (long-term contract)

SmartGrid finances 100% — client pays zero

SmartGrid CAPEX	5,700,000 €
Net after aids (15%)	4,845,000 €
Revenue share (60%)	516,000 €/yr
SaaS /site/yr	5,000 €
O&M cost	(10,000 €)
Net income /site/yr	511,000 €
Payback (net CAPEX)	≈ 9.5 yrs
Contract duration	15 yrs

YEAR 1 COMPANY OPEX — What it costs to run SmartGrid in Year 1

Shareholders (5 × 5k€/mo × 12)	300,000 €	Marketing (10k€/mo × 10 months)	100,000 €
Staff — 3 FTE (Joseph + 2, 3k€/mo)	108,000 €	Travel & site visits (5k€/mo)	60,000 €
Office rent & utilities	24,000 €	Legal, insurance, IP, trademark	30,000 €
Software dev + Azure (Yr1)	250,000 €		

TOTAL YEAR 1 OPEX

872,000 €

SALES TARGET & BREAKEVEN (Model 1 focus)

EPC margin — 1 site

855,000 €

vs 872k€ Yr1 OPEX

Sites needed to cover OPEX

2 sites

EPC-only basis

Breakeven month (sign 1 site by M4)

Month 6

cumulative +ve

HOW THE BREAKEVEN WORKS — Conservative scenario (1 site signed Month 4, 2-month install lag)

Event	Month	One-time revenue	Cumul. OPEX	Cumul. cash position
Company launches	M1	—	~66k€	~(66k€)
Marketing kicks off	M3	—	~215k€	~(215k€)
Site 1 deal signed	M4	—	~290k€	~(290k€)
EPC payment received	M6	855,000 €	~442k€	~ +415k€ ✓ BREAKEVEN
Site 2 deal signed	M8	—	~590k€	~ +680k€
2nd EPC payment	M10	855,000 €	~740k€	~+1,410k€

KEY TALKING POINTS FOR THE MEETING

- **Model 1 requires ZERO capital from us**
Client pays the 5.7M€ — we invoice the EPC margin (855k€) at completion. No debt, no dilution.
- **ONE deal nearly breaks us even for the year**
872k€ OPEX vs 855k€ per site. Two deals = fully funded + 838k€ surplus. Our sales target is 2 signed sites in Year 1.
- **Recurring revenue kicks in immediately**
15k€/site/yr (SaaS + maintenance) from the month after signing. Every site is a revenue annuity.
- **Model 2 is the long game**
We finance the CAPEX (5.7M€) but own the asset for 15+ years. Net income 511k€/yr/site. Discuss SPV structure.

MODEL 1 — 15-yr revenue
per site | Total: 1,080,000 €

MODEL 2 — 15-yr income
per site | Gross: 7,665,000 € | CAPEX: 4,845,000 €

What this means:

79% of our lifetime revenue per site comes from the one-time EPC margin (855k€) collect over 15 years. Model 1 is front-loaded: close the deal, collect the margin — then maintain

What this means:

98% of revenue is the energy savings share (60% × 860k€ = 516k€/yr). No upfront lump sum — income accumulates every year over 15 years. Gross: 7.67M€, but with a 1% O&M cost, net income is 7.52M€. Net profit at Year 15: 2.82M€ — 2.6× more than Model 1, but patience and capital required.

Annual revenue per site — year by year

Reading the bars:

Model 1 (blue bars): Year 1 generates 870k€ — 855k€ EPC margin (dark blue) + 15k€ recurring. From Year 2 onward, only 15k€/yr. The business must keep signing new clients to generate EPC margins each year. | Model 2 (amber bars): No spike — steady 511k€ net income every year from the moment the installation is live. The asset works for us without selling again.

Cumulative income per site — breakeven view

M1: 930k€ | M2 gross: 2,555k€

M2 net: still (2,290k€) in debt
→ M1 clearly better at this stage

M1: 1,005k€ | M2 gross: 5,110k€

M2 net: just +265k€ recovered
→ models converging

M1: 1,080k€ | M2 gross: 7,665k€

M2 net: +2,820k€ profit
→ M2 wins by 2.6×

Choose based on capital

M1 = cash flow now, no capital
M2 = patient capital, 7× income
