Triple Eight Group -

Company introduction

London | September 2026

Introduction

- Ethical Power (trading name of Triple Eight Group) is entering a new phase of growth as it transitions to an IPP (independent power producer) business model. This presentation outlines our capabilities and value add we present to investors.
- **The opportunity:**
  - 6 GW+ total identified project pipeline across UK, Spain and New Zealand for the next 5 years
  - Additional opportunity to grow our divisions across new territories in Europe
  - Further opportunities being identified and evaluated across all territories and technologies
  - Target annual delivery:
    250MWp solar PV + 250MW BESS / year / territory

About Ethical Power and our growth strategy

Expertise across all project stages

We are global renewable energy specialists, focused on high-quality solar PV and battery energy storage systems (BESS) management.

- Born in the UK, trusted globally. We were founded in 2010 in the South West and were the UK's first independent, vertically integrated renewables company.
- Our structure enables investors and partners to move past typical barriers to scaling quickly by providing end-to-end solutions and enabling national and international growth at pace with a comprehensive delivery and management partner.
- With end-to-end expertise, we can maximise asset value and performance throughout the entire project lifecycle. Our well-established relationships with suppliers allow for controlled risk & contract management.
- Since 2014, we have delivered over 50 utility-scale ground-mount solar farms and installed over 1.2GW of battery storage systems in the UK.
- We offer our expertise in asset management and project delivery management services in the UK and internationally and have been trusted by some of the leading names in the industry.

800MWp solar + 1.6GWh BESS delivered

ethical power

Building an IPP

- We are on a journey to become an IPP – Independent Power Producer – owning and operating a portfolio of assets.
- Our expertise allows us to maximise value throughout all project lifecycle stage: at development, delivery and during its operational life.
- A significant pipeline of quality projects has already been identified across each territory.
- Conversations with project finance partners are underway in the UK and Spain.
- Once the strategy is realised in the UK and Spain, we will be expanding into other territories, including Germany, Italy and others.
- Our risk management approach:
    - We maintain established relationships with experienced contractors and equipment suppliers, supported by robust due diligence, contractual protections and performance monitoring.
    - Dual-sourcing of key equipment reduces dependency on individual suppliers, while alternative contractor and procurement routes provide resilience against disruption.
    - Project-specific contingencies, including programme float, cost allowances and replacement supplier plans, are built into delivery planning to protect completion dates, project economics and long-term asset performance.
    - In-house optimisation, delivery management and long-term technical and commercial management ensure value is maximised and monitored continuously.

ethical power

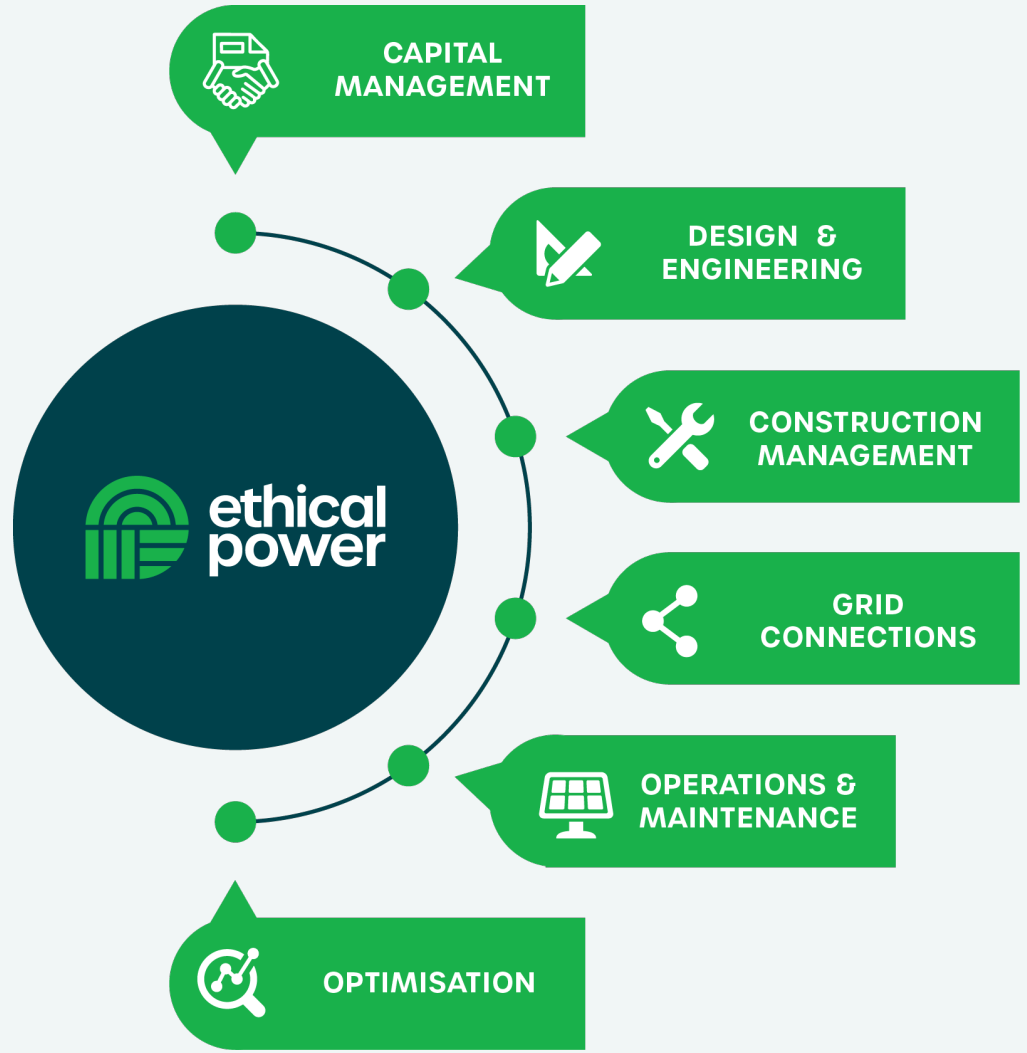
The opportunity

- 6 GW+ total identified project pipeline across UK, Spain and New Zealand for the next 5 years
- Additional opportunity to grow our divisions across new territories in Europe
- Further opportunities being identified and evaluated across all territories and technologies
- Target annual delivery:
  250MWp solar PV + 250MW BESS / year / territory

250MWp / 250MW

Business structure

- Ethical Capital
  - funding & partnerships, including management of current JVs;
  - development and optimisation of the Group's own assets;
  - pursuing joint-venture opportunities to acquire assets and pipeline at attractive entry points for optimisation and construction;
  - leading the fund raise for the Group's pivot to being an IPP in the UK and further expansion in Europe
- Ethical Power Utilities
  - UK construction and O&M management for Ethical Capital-managed projects
- Ethical Power international
  - Spain – building Ethical Capital assets and for selected third-party clients.
  - New Zealand – solar and BESS EPC work for utilities.



Current international footprint

United Kingdom
Exeter / London

Spain
Madrid

New Zealand

ethical power

UK – our home market

- In the UK, Ethical Power owns stakes in a portfolio of assets and offers end-to-end asset management solutions to third-party clients, providing unrivalled value and optimising asset performance at every stage of the project lifecycle.
- More than 50 utility-scale solar projects and 1.2GW BESS built or in construction (responsible for the delivery of over 30% UK BESS capacity across 2023/2024).
- The UK's Solar Roadmap and Clean Power 2030 plan target 45-47 GW of total solar capacity by 2030, with utility-scale projects expected to contribute the majority, potentially reaching 54-57 GW under optimistic scenarios and scaling to 75-85 GW by 2035. 20-25GW of new utility-scale capacity are expected by 2030.
- Ethical Power is well positioned with market-leading internal expertise to deliver the NSIP (Nationally Significant Infrastructure Project) renewable energy projects anticipated to come online over the next 5-15 years in the UK. Currently there are approximately 18.5GW of projects in application for the NSIP status.
- The growing market presents significant opportunities for Ethical Power to deliver new large-scale solar farms and BESS for its own portfolio or with partners as a comprehensive asset management provider.

Ethical Power New Zealand

- Ethical Power entered the New Zealand market in 2021, forming a joint venture with Solar South-West and Hive Energy, HES Aotaroa. Ethical Power NZ was formed in 2022 with Ethical Power NZ developments following swiftly.
- In Q4 2023, the HES Aotearoa JV sold its rights to nine solar farm developments to Lodestone Energy. Lodestone awarded Ethical Power NZ exclusive framework EPC contracting agreement in respect of these developments.
- Early-mover advantage places Ethical Power NZ as a market leading EPC in an environment were forecasts show a rise in renewables share of the NZ energy mix to over 90% in the 2030's
- In 2026, Ethical Power NZ acquired Drillco, an M&E contractor with extensive PV construction experience in New Zealand.
- Ethical Power NZ has a significant pipeline of work >3GW and is currently delivering 180MWp for Meridian Energy and Lodestone Energy.

Growth ambition

- Ethical Power NZ plans to continue to maximise the market opportunity for solar PV EPC building on its successful track record to date.

Ethical Power Spain

- Ethical Power Spain was established in 2021 with a head office in Madrid. It currently also operates an O&M hub for its Fundici Solar Park in Guillena. It has now and successfully completed delivery of two 55MW solar PV projects.
- Ethical Power Spain is a stable and profitable business, well placed to take advantage of the growing standalone and co-located BESS opportunity in Spain. It has an in-house design & engineering team with a prominent network of verified delivery partners to ensure the highest quality development and build.
- Spain's updated National Energy & Climate Plan raises storage ambition to 16 GW of BESS projects through 2030 - roughly 29% of a global 55 GW pipeline. Ethical Power Spain is perfectly positioned to get the value of this opportunity – building on the significant BESS experience we have in the Group. We can deliver standalone BESS and co-located projects while others are still learning about the market.

Growth ambition

- Ethical Power Spain is looking for expansion with BESS and co-located project delivery through acquire – build – hold model with strategic partners.

Our results

Our 16 years of experience designing, building, and operating renewable energy assets have seen us work with some of the biggest players in the industry, including:

INFRALAND
Triple Point.
infinis
RWE
ENCAVIS
STATERA
low carbon
Fuse
ecotricity
ib vogt
BW ESS
CanadianSolar
SMS
conrad energy

Our goal is to ensure that we generate the maximum possible output and efficiency from our assets, delivering the best value to all stakeholders.

Projects developed and built by Ethical Power have achieved:

90% **performance ratio**

99% **availability**

ethical power

Origination, investment management and de-risking asset acquisitions

- We identify high-value renewable energy projects suitable for acquisitions based on criteria that matches the investors' project needs. This can include developing our own assets and bringing projects from other developers through the last-mile to ready-to-build (RTB).
- We have traded dozens of projects across the world and can streamline M&A transactions with due diligence, negotiations, planning permission, and grid applications.
- Our vertically integrated model facilitates risk mitigation from day one, ensuring bankable project structures and optimised investor returns.
- We provide investors with everything from risk registers and CAPEX analysis to exit strategies.

ethical power

Project Delivery & Management

- As the project delivery partner, we provide comprehensive project management services, procurement and engineering support, including design optimisation, full construction management and commissioning.
- Since 2010, we have built and connected to the grid dozens of renewable energy assets, including more than 1GW of BESS. We have the experience to ensure the project meets the highest quality standards, while maintaining a firm focus on on-time and on-cost delivery, ESG and stakeholder management.
- Our pool of trusted subcontractors and supply chain partners enables us to provide the appropriate expertise and components to deliver the project successfully. We maintain established relationships with experienced contractors and equipment suppliers, supported by robust due diligence, contractual protections and performance monitoring.

ethical power

Technical and Commercial Asset Management (TCM)

- We help investors make key decisions around maximising project value, can advise and facilitate the best route-to-market strategy, including PPAs, CfDs, REGO trading and more.
- Following commissioning, our TCM services combine deep technical and financial expertise and bring in our in-house O&M team to manage asset revenue, cost control and optimised performance, while ensuring the longevity of the project.
- Our 24/7/365 Control Room is capable of processing over a million data points an hour. We use this real-time data combined with a team of analysts to safeguard yield, prolong asset life, and enhance revenue certainty.
- For BESS, this includes remote intervention capabilities enabling us to rapidly react to site events, often reactivating assets in minutes.

ethical power

Design & engineering: optimisation, hybridisation

- With over 15 years of experience in designing, building, and operating renewable energy assets, we optimise each project, helping it achieve the best possible performance without compromising on build feasibility or programme health.
- We have long championed hybridised (co-located) energy solutions, which maximise grid connection options and can result in increased energy efficiency, reduced wastage, and greater revenue potential.
- Combining design and engineering expertise with access to an established supply chain ensures quality through and through. Our holistic approach means that our technical teams work alongside the financial analysts to develop the optimum solutions guaranteeing highest returns throughout the project lifespan.

ethical power

Operations & Maintenance and asset life extension

- Our network of highly skilled engineers are based in key locations, to ensure fast response times and to carry out preventative, predictive and corrective maintenance.
- We utilise a broad range of methods to monitor and maintain the performance of your asset, including electroluminescent testing, infrared imaging and advanced SCADA analysis.
- Our team specialise in extending the life and enhancing the performance of existing renewable assets through our bespoke repowering and rejuvenation services.

Example projects and case studies

Larport Solar Farm

Client: Conrad Energy

Contract: EPC, O&M
Size: 45MW
Completion: July 2024

Larport Solar Farm was the first utility-scale solar project developed by Conrad Energy. It was built by Ethical Power as the principal EPC contractor.

Located on a flood plain in Herefordshire, the project posed a number of challenges, both in terms of design optimisation and delivery. The site spans 120 acres with a proportion dedicated to biodiversity enhancements, including bird and bat boxes, badger gates and new wildflower meadows.

Since energisation, Ethical Power continues to look after the site with complete O&M services.

The “Brunel” Portfolio

Client: RWE

Contract: EPC, ICP
Size: 190MWp solar + 200MW BESS
Completion: 2025/2026

The work packages include full-wrap EPC for solar PV and battery storage at multiple sites with a total installed capacity of 190MWp of PV and 200MWhr of storage delivered across 2025/2026.

The battery storage includes a novel DC-coupled solution not utilised in the UK before, and is subject to further design development between our team and RWE.

Sizing John BESS

Client:	Varco / Adaptogen
Contract:	EBoP
Size:	57MW / 114MWh
Completion:	December 2025

Sizing John Energy Storage Project is a strategic grid-balancing facility located near Liverpool. Ethical Power was selected by asset owners Varco to act as principal contractor, providing full turnkey solution including the design, CDM, M&E, civils and ICP works at 33kV/132kV.

The scope also included the 500-metre off site route to connect the client's substation to National Grid's network, as well as procuring and commissioning the 132kV substation and auxiliary transformer on site.

Sundon BESS

Client:	DIF
Contract:	EBoP
Size:	50MW / 100MWh
Completion:	October 2025

Ethical Power completed installation and full commissioning of the Sundon Battery Energy Storage System, as well as the cable route connecting it to the nearby Sundon 400kV substation.

Ethical Power played a pivotal role in delivering the high voltage cable route connecting the BESS to the transmission network, alongside designing and installing the BESS facility itself. The Sundon BESS now forms part of the first UK “grid park” implemented by National Grid – a pioneering model that co-locates multiple renewable and storage projects on a single transformer connection.

Fundici Solar Farm

Spain

Client:	Encavis AG
Contract:	EPC and O&M
Size:	55MW
Completion:	2025

The 55MW Fundici Solar Farm is owned by Encavis AG, who selected Ethical Power as the principal EPC contractor and O&M provider.

Located in the Seville region of Andalusia, Spain, the solar farm was developed by Hive Energy, with design optimisation completed by Ethical Power to improve the efficiency of the plant. In addition to providing full EPC services, Ethical Power also carried out extensive works to connect the solar farm to the 132 kV Fundiciones Caetano substation, including the installation of several pylons along the 9km cable route.

Lodestone Energy

New Zealand

Client: Lodestone Energy

Contract: Performance Monitoring
Size: 2x 33MW

Our Performance Monitoring team worked in partnership with Lodestone Energy to support their first utility scale solar PV projects in New Zealand. Providing remote oversight across the portfolio allowed for early fault notification and therefore a significant reduction in downtime.

The Performance Monitoring service adapted to fit Lodestone's bespoke SCADA system, and integrated into their existing CRM system, allowing for Lodestone to optimise their procedures and systems for further projects without compromise.
