

ECOGRID RESORT™

The smart micro-grid for low-carbon holiday resorts

Solar generation · battery storage · AI control · guest app — built for open-air tourism

01 · The concept — a services platform, not an installer

ECOGRID RESORT™ acts as the energy “operating system” of the site: it orchestrates assets (multi-brand) and usage in real time to maximise solar self-consumption, cut grid peaks and protect guest comfort.

Generate : on-site solar — carports, roofs, pergolas; turning inert surfaces into assets

Store & control : LFP batteries (resilience + arbitrage), AI-driven EMS 24/7

Distribute & charge : control of pools, A/C, hot water; EV chargers & smart charging

Engage & measure : guest app (EcoScore, EV booking, rewards); ESG carbon reporting

02 · Our edge: distribution, not panels

ECOGRID RESORT™ is neither a manufacturer nor a mere inverter EMS — a commodity offered by FoxESS, SolarEdge, Huawei... : it is the **software layer above the hardware, brand-agnostic**. The hard part is not installing solar but reaching operators — hence our reliance on **COREPROMA** access and on **occupancy data** (bookings → AI load forecasting) that no generic EMS has. Value comes from recurring software and the network of sites, not from hardware.

03 · The market — Southern Europe

- Target: campsites, holiday villages, resorts & eco-destinations — Spain, Italy, Corsica, Sardinia (**≈ 12,000 sites**, order of magnitude to confirm).
- Strong summer peaks (A/C, pools, hot water, catering) and large solar-ready surfaces.
- Regulatory tailwind: EPBD 2024/1275, France loi APER (car-park solar), CSRD.
- **Start on the islands**: Corsica & Sardinia are non-interconnected — strongest support and resilience value.

04 · The model — assets + SaaS

- **Build & integrate** — engineering, supply & installation; EPC margin per site
- **Recurring software & O&M** — SaaS licence (EMS, ESG reporting), 24/7 supervision — high-margin recurring
- **Energy value** — self-consumption, surplus resale, EV charging, flexibility / VPP
- **Platform & network** — energy-as-a-service, carbon/ESG advisory, franchise / brand licence

05 · Invest & co-develop — an open model

Industrial / EPC partner

Co-invests equity, leads installation & procurement, earns EPC margin and asset returns.

Infrastructure / carport partner

Supplies and finances solar structures housing inverters & batteries; takes part in installation.

Financial investor (fund / VC)

Capital contribution, financial return.

What COREPROMA brings (constant) : the EMS/AI software core, the brand, O&M orchestration and ESG reporting, and market access to the segment. Vehicle: one asset SPV per site (or cluster), shared software core.

06 · Roadmap

2026-27

Island pilot (Corsica): studies, permits, financing, build

2028

Operation, KPI proof, first contracts

2029-31

Industrialisation: France · Italy · Spain

2032+

European platform, 100+ connected sites

ECOGRID RESORT™ — smart energy for sustainable tourism. Turning every destination into an autonomous, high-performing and responsible ecosystem.
